

“

It caused the tumors to shrink just days after treatment.

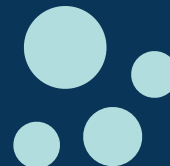

– Danielle, pet owner

Kubanda Cryotherapy offers a safe, minimally invasive alternative to surgical mass removal. With the CryoNeedle, your vet uses focused, extreme cold to easily treat your pets and send them home ready to play.

This has really made a difference in her quality of life. We are beyond grateful.

– Victor, pet owner

Kubanda Cryotherapy

The only non-surgical treatment for lumps, bumps, and cancers in pets

Skip the Scalpel with Cryotherapy

The quality of care you expect for your family

One in four animals will develop a tumor in their lifetime.

The Kubanda CryoNeedle treats internal and external tumors in pets using cryotherapy, or the use of extreme cold to treat unwanted tissue.

The technique has been used in human medicine for over 100 years.

A single needle poke freezes and treats tumors safely, quickly, and economically.

Unlike traditional surgery, cryo allows pets to quickly return home ready to play. And — without stitches or scars — there's no need for intensive home care.

Treating lumps, bumps, and tumors is easier than ever

Treating tumors with the CryoNeedle is

- ✓ **Minimally invasive**
Just a needle poke and no scarring
- ✓ **Easier on your pet**
No big incisions or wound drainage tubes means low risk of complications
- ✓ **Quick recovery**
Patients can go home same day

Peace of Mind

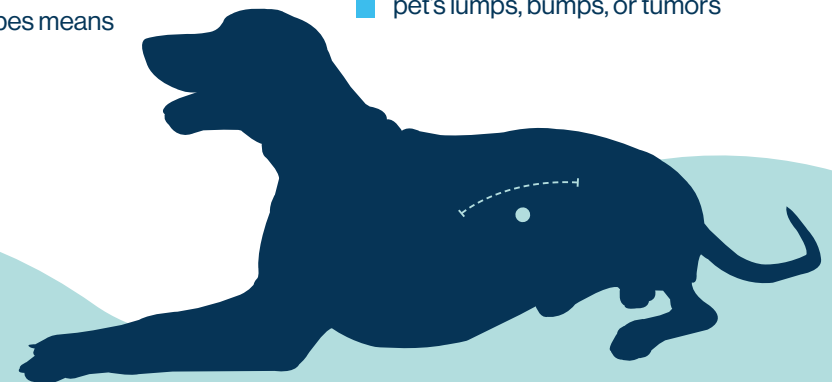

No more watching and waiting when your pet develops a lump

More Time Together

Pets typically resume normal activities the next day

Cutting-Edge Treatment

An easy solution for your pet's lumps, bumps, or tumors

----- Traditional Surgical Incision
● Needle Prick from Cryotherapy
